

DIGITAL LITERACY-PROJECT

NAME : S G SUDHARSHAN

REG NO. : 25BAI10706

BRANCH : BTECH AI AND ML

YEAR : 2025-2029

COURSE TITLE : DIGITAL LITERACY

COURSE CODE : CSE0001

DATE : 30/3/2026

INTRODUCTION

Within the current world of academia and professionalism, the need for digital literacy has changed from a secondary need to an absolute need. The current project report is a part of the academic requirement for a newly selected Student Digital Ambassador for VIT Bhopal University. In the current world of digital literacy, as a part of the Student Digital Ambassador role, the overarching need is to ensure that peers can effectively navigate the complexities of the current digital world. This is to be achieved by encouraging peers to be safe, professional, and efficient in the digital world. In the current world of digital literacy, a comprehensive digital literacy portfolio has been designed and developed. This digital literacy portfolio includes five unique tasks, each of which is a part of the five modules of the digital literacy program. This includes the development of visual awareness infographics, the development of a professional profile

on GitHub and LinkedIn, collaborative data collection, email etiquette, and the exploration of current cyber threats facing the world of computer technology. In the current world of the project, all of the deliverables have been made openly available within a single repository on GitHub, thereby serving the function of a digital asset. The current project report is a journal of reflection on the experiences and the potential for the application of the skills that have been learned to ensure a secure and impactful digital footprint over the next four years

TASK-1 : DIGITAL LITERACY **INFOGRAPHIC**

Topic Covered: Meaning of digital literacy, digital tools for students, and internet safety.

Reflection:

I am a Student Digital Ambassador. I have decided to create a visual infographic on one page by using the tool Canva. This visual infographic will assist my peers in understanding the importance of digital literacy. The visual infographic will include the three major pillars of digital literacy, i.e., the meaning of digital literacy, the usefulness of digital tools for students, and internet safety. In order to attract the attention of the first-year students, I have decided to create a contemporary visual infographic with clear icons and bullet points.

The most interesting part of the entire experience is the way I have managed to transform the content in such a way that it is concise and visually appealing without compromising the content or the main idea. This entire experience has taught me that visual communication is

not just about creativity; it is also about thinking and planning. The only challenge I have encountered is the way to create a visual hierarchy on the visual infographic such that the reader's eye can move from the meaning of digital literacy to the usefulness of digital tools for students..

Tool Used: Canva

TASK-2: Digital Portfolio

Platforms Chosen: GitHub, LinkedIn, and Kaggle.

Reflection:

For building my foundation in the online world, I have chosen to use GitHub, LinkedIn, and Kaggle. GitHub has become my primary version control platform, where I have initialized a profile README file containing information regarding my code branch and learning objectives. LinkedIn has become my primary networking site, where I have successfully added information regarding my ongoing B.Tech program and my expected year of graduation. Lastly, Kaggle has become my platform for exploring data science and predictive modeling challenges. In the upcoming four years of my B.Tech program, I plan to make optimal use of these three platforms. On GitHub, I plan to commit my academic lab files and coding projects to showcase my progress as a budding engineer. On LinkedIn, I plan to use this platform to get connected

with industry alumni and look forward to exploring potential summer internships. On Kaggle, I plan to use this platform to compete in Kaggle competitions to hone my problem-solving skills beyond the classroom.

KAGGLE PROFILE : S G SUDHARSHAN

TASK-3 : Coding & Collaboration

Platforms Used:

The platforms that were used for the assignment include 'Hacker Rank,' where a 'beginner-level' Python programming code was run and solved by the author of the assignment, thereby providing the author with a 'working knowledge' of the 'online judge' system. The platforms that were used for the assignment include Google Workspace, where an 'Interactive Digital Literacy Quiz' was created by the author of the assignment with five questions, where different 'metrics' and 'reflection' questions were asked to check the 'peer awareness' of the answers.

The platforms that were used for the assignment are going to be extremely useful for the author of the assignment during the upcoming semesters of university life. The platforms such as 'Hacker Rank,' where a 'beginner-level' Python programming code is to be run and solved by the author of the assignment, thereby

providing the author of the assignment with a 'working knowledge' of the 'online judge' system, are going to be extremely useful for the author of the assignment during the upcoming semesters of university life. The platforms such as Google Forms and Google Sheets, where the author of the assignment is able to efficiently complete the group projects by synchronizing the data in the Google Sheet in real-time, are going to be extremely useful for the author of the assignment during the upcoming semesters of university life.

The gap in individual and collaborative problem-solving was bridged with the assignment itself.

TASK-4: Professional Email & Etiquette

Focus Areas: Drafting professional email, Checklist for Social Media Dos and Don'ts.

Reflection:

The biggest communication breakdown, which could have happened in the context of digital communication, is the scenario where the student sent the message to the professor through an instant messaging platform, which might have some abbreviations and a demanding tone.

One such hypothetical scenario, which could have happened to me in the past, is the scenario where I sent a message to the professor in the form of a text message in the late hours of the night asking for the extension of the assignment, which was to be submitted. The communication was devoid of any context and formal greeting. The professor took it offensively, and the communication breakdown happened. In order to avoid such communication breakdown in the future, I could have sent a well-structured email to the professor during the working hours. The student could have shown their

maturity level by sending the appropriate subject heading, greeting, reason for writing, and closing the email. The professional communication in the context of digital communication will set the tone for the healthy relationship in the academic or professional field. I have understood through the task that the etiquette in the context of digital communication is not the number of words we use for the communication. Instead, it is the clarity of the communication, which needs to be developed in the early stages so that the footprint left by the individual is respectable.

TASK-5: Cybercrime Case Study & Prevention

Focus Areas: Case study on cyber harassment, student safety prevention checklist.

Reflection:

During my research on cyberbullying in college students, I was astonished to learn that cyberbullying cases rarely occur at the hands of internet trolls. Rather, cyber harassment mostly occurs when there are fluctuations in social groups, where personal grievances or social boycotts are used as a tool to harass people to a great extent. This was a wake-up call for me to realize that cybersecurity measures are just a part of a shield.

What I need to work on immediately, based on what I have learned from researching cyberbullying in college students, is a personal habit change. I am adopting a 'pause before typing' habit. I will immediately disconnect from any toxic message chain or comment section instead of engaging in a vicious cycle. I will

also make sure to inform all my batchmates about the National Cyber Crime Portal and 1930 Helpline. This will ensure that everyone becomes a responsible bystander in such situations. This reflection has successfully taught me that cybersecurity is not just about strong passwords but about empathy too.

CONCLUSION

The experience of completing this Digital Literacy Portfolio project has been a highly enriching experience for my academic journey. Becoming a Student Digital Ambassador has made me think not only of my own technical practices but also of how I represent and protect myself online. From moving through the process of setting up repositories, standardizing professional profiles, to analyzing contemporary cyber security challenges, it has bridged the visual divide between internet surfing and professional digital citizenship. These skills are going to be a foundation for my B.Tech course and professional career in the tech industry. This experience has shown me that it is not enough to be digitally literate; it is also important to be digitally safe, sound, and successful
